LE SPA

Welcome to a haven of serenity...

LE SPA at Domaine du Mas de Pierre invites you to an experience of absolute indulgence in a sober setting, using a soft and harmonious chromatic palette, playing with textured materials inspired by the Mediterranean.

As you enter LE SPA, a unique, sensual and captivating fragrance reveals the olfactory identity of this wellness sanctuary. Its signature: the tuberose flower essence. Its name: Volupté.

The renowned nose, Sonia Godet, imagined a solar and feminine composition from 55 natural ingredients. This signature fragrance is a tribute to the region and Saint-Paul-de-Vence, where tuberose flowers grow and bloom every year in late summer. The great-granddaughter of perfumer Jean Julien Godet, Sonia Godet, relaunched the family perfumery business in 2017 by collaborating with heritage producers and focusing on replicating the same ancestral production techniques. Composed in Saint-Paul-de-Vence, Parfums Godet are made exclusively from regional flowers.

In addition to its interior Signature fragrance, Domaine du Mas de Pierre offers Signature scrub, body wrap, bath and massage oils. Our Signature Eau de parfum, scented ceramics and candles are also available at LE SPA Boutique. While savouring your exquisite moment at LE SPA, the unique fragrance of this local flower will lead you into a world of sheer relaxation, a wellness haven.

FITNESS

Exclusive to le Spa...

INTÉGRAL EMS

Intégral-EMS is a revolutionary fitness and muscle building high-intensity training method using electro-stimulation impulses to tone up and resculpt your body. It allows you to rapidly and effectively burn fat and gain tonicity.

Electrostimulation suit hygiene is 100% efficient by disinfecting with ozone and UV, which have bactericidal and fungicidal properties

Key Highlights:

- Time-saving training session, equivalent to a 4-hour training session in just 20 minutes.
- Hundreds of muscles stimulated in one session.
- Muscle fibres are recruited regardless of your body condition.
- No extra weight.
- No strain on the joints.
- Four hours of autonomy.
- Wireless for total freedom of movement.

Electrical muscle stimulation triggers reflex muscle contractions. A repeated electrical impulse on a muscle recruits 98 to 100% of the targeted muscle fibres, unlike a voluntary contraction which recruits only 40 to 60% of the muscle fibres during a traditional physical exercise.
